Building Systems and Sustainability Sub-Committee Meeting - 7/18/16

1. Reviewed the last meetings notes with the only addition of adding 'healthy' to the list of 100 year building priorities.
2. Reviewed the quality of control and the DOE approach to project quality results. The two committees agreed that there was value to formulate a 'owners reserve' to fund additional unforeseen project needs. The quality control process as defined by the DOE is acceptable to the two committees.
3. Committee involvement throughout the process would be a desired outcome to carry the quality objectives forward and ensure that quality is maintained.
4. The building systems and sustainability sub-committees would like to stay together for the future and be willing to accept new members.
5. PDT reviewed the latest building plan. A concept model will enable a first pass at the energy model which is anticipated to be presented at the next meeting.
